(Geography Specialization)

Geog. 4106
Geomorphology II
Time allowed (3) hours

Answer FIVE question. Illustrate your answer with sketch map and diagram wherever necessary.

1. Give a reasoned account on the development of depositional terraces.
2. Examine the major factors which are responsible for the changes in fan morphology.
3. Write a detailed account of frost action and frost wedging.
4. Present an explanatory account of rock glaciers.
5. Briefly explain the karst hydrology and drainage characteristics.
6. Explain how tides and currents each constitute a type of movement that can modify coastal properties.
7. Examine the major erosional processes functioning along coasts and their associated landforms.
8. Present an analysis of "reefs" which are common in coastal regions of the tropics.
